

adversary – training only

ϕ (24, from four-vectors): between groups – $m_1 + m_2, |m_1 - m_2|/(m_1 + m_2), \min m/\max m, m_1, m_2, \Delta R_{12}$;

within each group ($\times 2$) – $\max p_T$ ratio, p_T coeff. of variation, Lund $z_{\min}$, Lund $k_{T,\max}$, ECF₂, ECF₃, D_2 , Dalitz max and min.

ϕ_j^{ISR} (3): $p_{T,j}/H_T, |\eta_j|, \min_i \Delta R_{ij}$.
