

ϕ between groups: $m_1 + m_2, |m_1 - m_2|/(m_1 + m_2), \min m / \max m, m_1, m_2, \Delta R_{12}$. Within each group ($\times 2$): max p_T ratio, p_T coeff. of variation, Lund $z_{\min}$, Lund $k_{T,\max}$, ECF₂, ECF₃, D_2 , Dalitz max and min. ϕ_j^{ISR} : $p_{T,j}/H_T, |\eta_j|, \min_i \Delta R_{ij}$.
